

Harness the Future, Today

In our fast-paced digital economy, organizations must be able to make quick decisions about where and how to allocate resources. Turn to ConRes to optimize your existing cloud resources and efficiently integrate for future needs.

Top 10 Reasons to Choose ConRes

1 Scalability

“One size fits all” is not an effective way to manage software and application services. That’s why ConRes creates a software and service package that meets the distinct needs of an organization. And when needs evolve, services can easily scale up or down.

2 Competitive Edge

ConRes can help organizations move ahead with the full potential of Microsoft 365 solutions, which can evolve, transform, protect, and optimize their business plans.

3 Data Accessibility

Data should be available when, and where, it’s needed.

Whether that’s in the field, in the office, or in the office at your home.

With the portability of Microsoft 365 solutions, ConRes can ensure that your team has access to all appropriate resources when they need them.

This ease of data accessibility fosters better collaboration and keeps workflows consistent.

4 Business-Focused

Using ConRes to augment IT teams can help your business free resources to focus on core business activities.

5 Integration and Innovation

From asset purchase to field deployment, ConRes can support IT teams across the entire supply chain. ConRes specialists manage configuration and integration, freeing up staff to focus on innovation efforts.

6 Security First

ConRes takes a security-first position across all solution offerings. That’s why we trust Microsoft Intune. From Intune’s comprehensive endpoint management tools to its security model, end-users are protected at every turn.

Trust no one and verify everything.

7 Cost Effectiveness

Gone are the days of umbrella licensing for software. With services like License Management, ConRes will ensure you’re only paying for the licenses you need.

8 Sustainability

Cloud solutions can be more energy-efficient and have a smaller carbon footprint than traditional data centers.

9 Avoiding Data Disasters

When files are lost or corrupted, work doesn’t need to stop. ConRes has developed a comprehensive backup and recovery solution by combining Veeam Backup with Microsoft 365’s data loss prevention solutions. This enables data to be automatically backed up and quickly retrieved to ensure business continuity.

10 Automatic Updates

ConRes’ management of applications and services through Microsoft 365 ensures organizations always have access to the newest software and application versions without additional IT effort.

Together, ConRes and Microsoft 365 empower efficient decision-making, balancing cost, performance, and speed.
